Technology Supplier Assessments

Technology Supplier Assessments

The ATA is regularly appointed to evaluate bulk purchase/preferred buyer proposals from technology suppliers on behalf of clients. Our clients have included local councils, community groups, commercial organisations and private individuals.

The ATA can review the following sustainable technologies:

- solar photovoltaic (PV) systems;
- solar hot water systems;
- heat pump hot water systems;
- energy efficiency lighting;
- insulation and other thermal measures;
- reverse cycle air conditioners;
- electric bikes;
- rainwater tanks; and
- greywater systems.

We assess the suppliers' tenders based on weighted considerations of price, component quality, warranties, finance arrangements, commercial track records and company commitment to sustainability principles. In addition to recommendations for preferred suppliers, we can also supply clients with an excellent tool with which to conduct future analyses and assessments of suppliers and their products.

Case Studies

Preferred Supplier Assessments

Clients: Moreland, Willoughby, Mornington, Darebin, Campaspe, Centroc & Fremantle Councils

As a trusted source of independent advice on sustainable technology, the ATA works with local and state governments, the private sector and community organisations to manage tender processes and review and appoint preferred suppliers of sustainable technology.

Over many assessments, the ATA has built up a database of component and supplier information, and a specific weighted scoring system which allows us to find value for money and strong consumer protection on behalf of our clients and project partners. The ATA provides full transparent reporting and works with project clients to achieve the best possible result on behalf of their stakeholders.

The Alternative Technology Association (ATA) has more than 30 years' experience providing independent advice and analysis on sustainable technologies and practices to consumers, governments, business and industry. ATA's expertise lies in its technical knowledge and communications capacity for sustainable solutions for homes, businesses and communities.
